

Jerry Huang

PERSONAL INFORMATION

Name: Jerry Huang
Nationality: Taiwanese
Location: Taiwan
Language: Native Mandarin, Conversational English

EDUCATION

2017 – 2020

National Cheng Kung University

Master of Computer Science and Information Engineering

- Contributed to the development of a Record-may web automating Chrome extension.
- Designed an algorithm to detect the visibility of any element on a website without circumventing browser restrictions, documented in a thesis.
- Led the migration from JavaScript to TypeScript.

2013 – 2017

National Chiayi University

Bachelor of Computer Science and Information Engineering

TECHNICAL SKILLS

- Development Frameworks
 - Docusaurus
 - Electron
 - Node.js
 - React
 - Redux-Saga
 - Redux Toolkit
 - TypeScript
- Build & Testing
 - Babel
 - electron-vite
 - ESLint
 - Gitlab
 - Jest
 - Vite
 - Vitest
 - Webpack
- UI Libraries & Tools
 - Allotment
 - dnd-kit
 - hello-pangea/dnd (react-beautiful-dnd)
 - l18next

- Konva
- Material UI
- Nice Modal
- React Virtuoso
- Tolgee
- XYFlow (React Flow)
- Zod

CAREER HISTORY

SEP 2020 – MAR 2025

ISCOOILAB CO., LTD.

Apr 2024 – Mar 2025

Senior Software Engineer

- Replaced legacy Redux and Redux-Saga with Redux Toolkit and RTK Query, introducing modern features like caching, auto-refetching, and batch operations for improved efficiency and scalability.
- Upgraded building and testing tools from Webpack/Jest to Vite/Vitest, resulting in a speed improvement of at least threefold.
- Migrated the translation platform from 118next to Tolgee, enabling non-engineering members to easily update content and reducing dependency on developers.
- Utilised Docusaurus to statically convert all markdown files, significantly reducing bundle size and runtime conversion time while enabling modern features like search functionality.
- Implemented schema validation using Zod to ensure seamless interaction between the backend and frontend, preventing unexpected discrepancies.
- Developed a customisable system supporting arbitrary data types and components, including validation, display, editing, and other options, enabling non-frontend personnel to configure components for specific use cases.
- Collaborated with team members through code reviews to ensure code quality, share best practices, and maintain a clean and efficient codebase.

Sep 2020 – Mar 2024

Software Engineer

- Led the development of nearly all major features for a low-code RPA software, contributing to over 85% of the project scope, covering approximately 65,000 lines of code.
- Integrated Restful API data with Redux-Saga to centralise backend data management and decouple it from component rendering processes.
- Migrated the product to a multi-language setup using 118next, enabling seamless localisation with minimal changes to existing code.
- Enabled code compatibility for both Electron and web environments while maintaining a user-friendly Developer Experience.
- Configured Webpack to automatically select appropriate settings based on product versions, environments, and build modes, streamlining the build process and improving maintainability.

- Spearheaded UX design for all functionalities during the early stages of product development.
- Implemented RESTful API communication with JWT token authentication to ensure secure and reliable data exchange between the backend and frontend.
- Integrated GitLab CI into to automate unit testing and packaging processes, accelerating the release cycle.
- Conducted technical interviews for prospective team members.
