

Present To : BTSE
Position : Sr. Frontend Developer
Present Date : 2025-6-24

Personal Data

Candidate Andy Chen / 陳哲安
D.O.B 1995
Gender Male
Language English / Good

Summary

- Almost 5 years of experience as a Senior Frontend Engineer and Team Lead at TripSaaS, working extensively on front-end technologies like React, Next.js, and Node.js.
 - Demonstrated expertise with React and Node.js, as well as integrating libraries such as Axios, and Google APIs for various projects like COMMEET Cost Management System and Travel System.
 - Integrated cross-browser compatibility improvements using tools like ESLint and Prettier, and established Git Flow for version control, ensuring smooth collaboration and high-quality code management.
 - Managed complex front-end setups using pre-processing platforms such as SCSS in various projects, refining CSS styles to speed up UI development by 30%.
 - Led multiple Agile teams, implementing a CI/CD process and facilitating team growth through regular code reviews and Cypress testing.
 - Blog: <https://my.dasre.dev/blog>
 - Skills:
 - Frontend: JavaScript, TypeScript, React, Next.js
 - Backend: Node.js, Golang, PostgreSQL
 - Other: Git, GCP, Docker, Drone CI, GitHub Action, Terraform, AWS Amplify
-

Education

National ChengChi University
Master / Computer Science

2017 - 2019

Chang Gung University

Bachelor / Information Management

2013 - 2017

Employment History

TripSaaS Data Service Co., Ltd.

Senior Frontend Engineer (Team Lead) (2020-07 - Present)

Responsibility

- COMMEET Cost Management System (Next.js, Node.js, Golang)
 - [FE] Led frontend growth and provided architectural guidance to improve team workflow, code quality, and project scalability.
 - Introduced and maintained Design Tokens and Storybook to establish a consistent designdevelopment workflow.
 - Refactored core modules of the project and migrated to a Monorepo architecture to reduce codebase complexity and enable modular development.
 - Led the redesign of legacy components that were unsuitable for current needs, improving code readability, maintainability, and scalability.
 - Oversaw project planning and optimized front-end development processes, reducing onboarding time for new engineers by over 20%
 - Led a team to implement unit tests with Jest, increasing test coverage from 0% to 40% and significantly reducing component errors.
 - Refine the Node.js log collection logic and centralize it to Grafana Cloud.
 - [BE] Assisted in service decomposition and partially implemented DDD (Domain-Driven Design) architecture refactoring to reduce coupling issues and facilitate testing integration.
 - [SRE] Took over and optimized existing infrastructure, leading CI/CD implementation.
 - Managed a variety of services across the three major cloud providers (AWS, Azure, GCP), including but not limited to networking, VMs, and Containers. And ensured the SLA was maintained at a minimum of 99.9%.
 - Integrated Grafana to aggregate log and machine status from various services into Grafana Cloud, and reduces the cost of using Cloud Ops Agent by about 30%.
 - Introduced Apache APISIX to replace the outdated version of Kong. APISIX provides easily configurable files and dashboards, eliminating the need to manually set up databases and third-party dashboards like Kong. Additionally, APISIX's configuration files include

Prometheus, which can be integrated into Grafana Cloud.

- Establish team CI/CD process (GitHub + Drone or GitHub Action + Docker) and respective pipelines.
- COMMEET Travel System (Next.js, Node.js, .Net Core 3.1)
 - Google Map, Google API integration, component design, setting up ESLint and Prettier, standardizing commit messages, encapsulating Axios, and improving Node.js Architecture.
 - Integrated AdminLTE3 into .Net Core 3.1, deployed script pattern, and common CSS style to reduce UI development time by 30%.
- Team Growth:
 - Implement a team Code Review mechanism to enhance code quality.
 - Establish a team Git Flow process.
 - Promote the tests for front-end projects, starting from zero tests to ensuring all new components have basic unit tests.
 - Assist the QA team in utilizing Cypress for project integration tests.
 - Chaired team meetings to assist team members in resolving development issues, and technology sharing every week (TypeScript, Global State in React...).
